

Introduction to Generative AI with AWS Project Documentation Report

Visit [UDACITY Introduction to Generative AI with AWS Project Documentation Report](#) to make a copy of this document.

Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: <ol style="list-style-type: none">1. Financial2. Healthcare3. IT	3
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the model_evaluation.ipynb file?	Traditional approaches to data management such as > SQL and NoSQL are not designed to handle the scale and complexity of modern applications. Data Virtualization is a modern approach to data management that enables organizations to access and analyze all of their data, regardless of location or format. Data Virtualization provides a unified view of data, allowing organizations to make better decisions
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the model_finetuning.ipynb file?	Traditional approaches to data management such as > [{'generated_text': " relational databases are no longer adequate to meet the needs of today's enterprise.\n\nIn this webinar, you'll learn about the benefits of the NoSQL database.\n\nThe NoSQL database is

	an alternative to the traditional relational database, which is inefficient for handling unstructured data"}}
